

# PS\_Assignment Part2

## 1. **Mutation Observers:**

It's an interface that provides us with the ability to watch any changes in DOM elements that connects to the Observer!

## 2. **CSS selectors:**

“.” => Which indicates to class parameter in the html tag, .ClassName.

“#” => Which indicates to id parameter in the html tag, .IDName

“::before” => Which indicates to insert content the tag element without changes in html implementation!

## 3. **Session Storage:** data stored in the current running session, ex: when I have a page, and this page have session storage of “name: abd”, once the page is reloaded or exited, all data will be gone.

**Local Storage:** data stored in the browser, it's like cookies, when reload the page, it will still exist!
